

RegenExcalibur - 1-Page Business Preview

Clean tech, forged for the future. | Founder: Justice Gray Maciocha | Alberta, Canada | June 16, 2026

Business thesis: RegenExcalibur is an Alberta clean-tech systems foundry building smart building surfaces, emissions-side monitoring prototypes, and AI-native product documentation workflows. The company is entering prototype-validation mode, not commercial-certification mode.

Product pillars

- FEX-01 / M3 Smart Siding / SSCSS: modular smart facade pathway.
- Smart Emissions Device: monitoring-first exhaust-side prototype.
- AI DevOps Layer: claims ledger, launch assets, data room, product orchestration.
- Conversion R&D Horizon: feasibility matrix and lab/partner research.

Funding / partner ask

- Prototype funding and materials support.
- Clean-tech advisors and grant navigation.
- Building-envelope, electrical, environmental, and IP/legal review.
- Pilot partners, lab partners, and aligned early-stage capital.

First milestones

- Physical FEX-01 proof panel with BOM, renderings, and service notes.
- Emissions bench prototype with sensor logs and MRV template.
- Public site + LinkedIn + Crunchbase launch.
- Private IP/legal review before detailed public disclosure.

Business model

- Consulting and technical documentation first.
- Prototype/pilot services and grants second.
- Software subscriptions, installation partners, licensing, product kits, and marketplace customization later.
- Revenue staged around evidence, not overclaiming.

Immediate execution sequence

- Launch public-safe website and docs.
- Keep patent-adjacent materials private.
- Contact NRC IRAP, Foresight, Alberta clean-tech programs, and targeted investors.
- Build first proof panel and log every claim/test in the evidence ledger.

Status note: business-development material only - not a securities offering, engineering certification, legal advice, or validated performance claim.
